- What we do?
- How we do?
- Package inclusions
- Pricing
- What you will be doing?
- Terms and conditions

What we do?

Dreamoz Technologies focus on providing online solutions for small scale and medium size organizations. We help our clients to identify the use of online platform to thrive their business. It could be the following: -

- Develop a web application, which is dynamic and can be managed by the customer.
- Develop features in web application according to business needs.
- Provide support and ongoing maintenance for customer web application.

How we do?

Build your responsive, mobile friendly, dynamic and search engine optimized web application. Update and manage your contents instantly.

How it works

1. Send us your data through WhatsApp or email
2. Choose any template of your choice
3. We will add all data provided in your template
4. Once you review and finalise, we will publish your web application live
5. You can manage your contents, add new pages, images and photos online

Package Inclusions

1. Domain name/Email/SSL
2. Hosting
3. Template for web application
4. Content management system based on the template
5. Search engine management for all pages and contents
6. Google analytics for measuring traffic
7. Google/Bing webmaster for search engine

Pricing

Pricing provided below is for a standard web application, pricing varies based on customer requirement. Not all the work is for the below mentioned price. Currency used here is in indian rupee, if you are overseas then whichever currency is there will be applied and the corresponding GST and tax laws applies.

1. Quote will be provided for the scope of work
2. Invoice will be provided after work completion
3. Web application setup fee - ₹15000 or \$300
4. AMC payable after 1 year - ₹3000 or \$100

What you will be doing?

We are looking for a seo specialist who can identify potential keywords and write contents for our clients during discovery phase. We will be checking and assessing your skillsets based on the following parameters -

1. Identify potential flaws from a web page
2. SEO basics checklist
3. Keyword research checklist
4. Traffic management
5. Potential seo issues
6. Page quality

Open your browser and load the following pages to start the assessment. Pick at least 5 sub-pages from the below mentioned pages, created based on custom keywords and identify the flaws in the page using steps 1-6. Post your reply using the contact form found under each page or subpage. Make sure you reply using your name and email address using which you have applied for this position so that we can track whose reply it is.
